# LJ 9000 MAIL FINISHER

ACTIVA **DPS** brings to you a new one step process to print, fold and seal in one single operation, from one single button !

### State of the art offset stacking

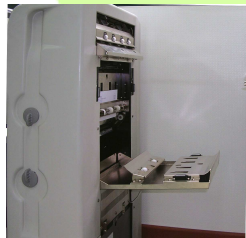

Easy to reach folding area and standard outfeed conveyor of the LJ 9000 MAIL FINISHER. A job separation function enables to offset each 5<sup>th</sup> or 10<sup>th</sup> document to facilitate counting and further processing of the printed documents. Dial-a-fold type folder.

**3000 documents processed in one setting from one single button**

### Automatic cleaning of pressure sealing rollers

A unique sealer self-cleaning device prevents the sealing rollers from toner or ink contamination, thereby eliminating the need for excessive cleaning. The self cleaning device is easy and low cost to be replaced -every 30 000 documents. This exclusive feature enhances mail quality and maintains optimum performance, even with on-line use with the LJ 9000 printer.

### Simple handling of jammed sheets

The LJ 9000 MAIL FINISHER can be separated from the printer\* in seconds by any operator. It is moved backward and forward, on wheels, allowing simple access to all paper flow areas and easy removal of mishandled documents.

\* Recommended for on-line folding or folding + sealing with HP LJ 9000, 8150, 9050 and 9500 series

## Features

|                                         |                                                                                               |
|-----------------------------------------|-----------------------------------------------------------------------------------------------|
| Maximum paper size                      | 220 x 356 mm (A4, 14", etc.)                                                                  |
| Minimum paper size                      | 110 x 140 mm (B5, A5, etc.)                                                                   |
| Paper weights                           | 60 to 140 g / m <sup>2</sup><br>(90 to 130 g/m <sup>2</sup> recommended for pressure sealing) |
| Weight                                  | 55 kilos                                                                                      |
| Feeder capacity (on HP LJ 9000 printer) | 3 000 sheets fed, printed + fold + sealed in ONE step / one button                            |
| Production capacity per hour            | 2 400 x A4 per hour (LJ 9000 printer speed)                                                   |
| Power requirements                      | 230 VAC / 50 Hz<br>115 VAC / 60 Hz                                                            |

|                                                                |          |
|----------------------------------------------------------------|----------|
| Re-settable total and batch separation counter                 | Standard |
| Double sheet and width detection for secure mailing operations | Standard |
| Dial-a-fold type folding area                                  | Standard |
